

### About Esri Malaysia

We are a multi-national organization specializing in enterprise software solution for large public sector customers, GLC and corporates in Malaysia. We expanded our business to Malaysia in 1983 and have since developed a loyal customer base leveraging on strong brand recognition, globally proven solution and industry expertise in Malaysia, South Asia and USA. We have largest market share and business growth is promising. Existing pool of resources can provide high quality consultancy services, project implementation and comprehensive customer support. However due to rapid growth we seek qualified and enthusiastic professionals with various skill sets and positive attitude to be part of our growth expansion.

# Senior Software Developer

### Overview

As a Senior Software Developer you will contribute to the technical design and development of industry leading solutions for both the web and mobile using your expertise across .NET, HTML, Bootstrap, ReactJS, CSS and Agile software development. We are building a team to work on multiple innovation projects using a variety of technologies.

You will help architect, design, develop, test, and deliver new location-based solutions across a range of technologies including web, mobile, tablet, 3D and augmented reality.

You will be part of a team of developers tasked with supporting product development and customisation activities for Esri Malaysia and its customers. You will be working within the Professional Services team.

#### Key accountabilities

- » Delivering high-quality scalable applications
- » Business discipline
- » Contribution to the team
- » Productivity
- » Innovation

### *Role and responsibilities*

- » Design, build, deliver and support innovative location-based solutions.
- » Determine appropriate technical architectures and make persuasive recommendations.
- » Work closely with the Team Leader, Project Manager, Chief Technology Strategist and customers to deliver project deliverables in a timely manner.
- » Communicate accurately and efficiently with other team members to ensure risks, issues, estimates and delays are clearly understood.
- » Work with other members of the team to deliver best-of-class solutions.
- » Take ownership of your work and manage priorities across multiple projects.
- » As part of a growing team, you will bring your experience to help in providing direction for the overall development environment and processes for the team.
- » Ensuring design-led thinking and design are incorporated into all aspects of the innovation process.
- » Proactively provide input on potential opportunities, solution strategies and the most appropriate solutions to meet market needs.

### *Personal requirements*

#### *Core Skills and Attributes*

- » Creative focus with experience in a range of technologies and design approaches.
- » Experience in solution design for mobile applications across different platforms.
- » Technologies will be selected to meet the requirements of each product but you should have experience with many of these: -
  - Web User Interface Development (HTML/JS/CSS/ReactJS/Angular)
  - Full Stack Development (.NET)
  - Identity management (SSO, OAuth, SAML)
  - Python Scripting
  - Database: Postgres, Microsoft SQL Server, Oracle
  - Development Tools: Jira, BitBucket, Postman
- » Experience in continuous development and agile practices.
- » Experience working with version control and build/test automation tools.
- » Excellent communication skills and a strong team player.
- » Ability to work with minimal supervision and to deadlines.
- » Positive and enthusiastic with a 'can do' attitude.

#### *Desirable Skills*

- » Experience working across mobile technologies and responsive design.
  - Mobile technologies (Xcode, Android, Xamarin, Qt)
- » Amazon AWS for Production Deployment
- » In-depth knowledge of the digital landscape including the latest tools and trends.
- » An intense curiosity and desire to push the boundaries of location-based solutions.
- » Experience with Esri Technologies

#### *Qualifications and Experience*

- » A bachelor degree in associated business disciplines (Computer Science, Information Technology, Software Engineering).
- » Four years' experience in a similar role.
- » Good written and verbal communication in English.
